

INTERACTIVE REPORT PRESENTATION

Brewing Insights: **Starbucks Beverage** **Portfolio**

A Comprehensive Analysis of Caloric, Sugar, and Caffeine Profiles in Corporate Offerings

Core Portfolio Dashboard Metrics

TOTAL VOLUME

32

Distinct beverage variations
analyzed across principal
categories

AVG SUGAR

32.68 g

Mean sugar content per
customized serving size

AVG CALORIES

190.67

Kcal baseline across standard
consumer recipes

AVG CAFFEINE

8.00 mg

Normalized caffeine metrics over
all standard preparation styles

Caloric Footprint by Category

The data clearly demonstrates that Smoothies represent the highest caloric intensity in the menu, whilst Shaken Iced Beverages offer a substantially lighter alternative for health-conscious consumers.

Caffeine Profile Dynamics

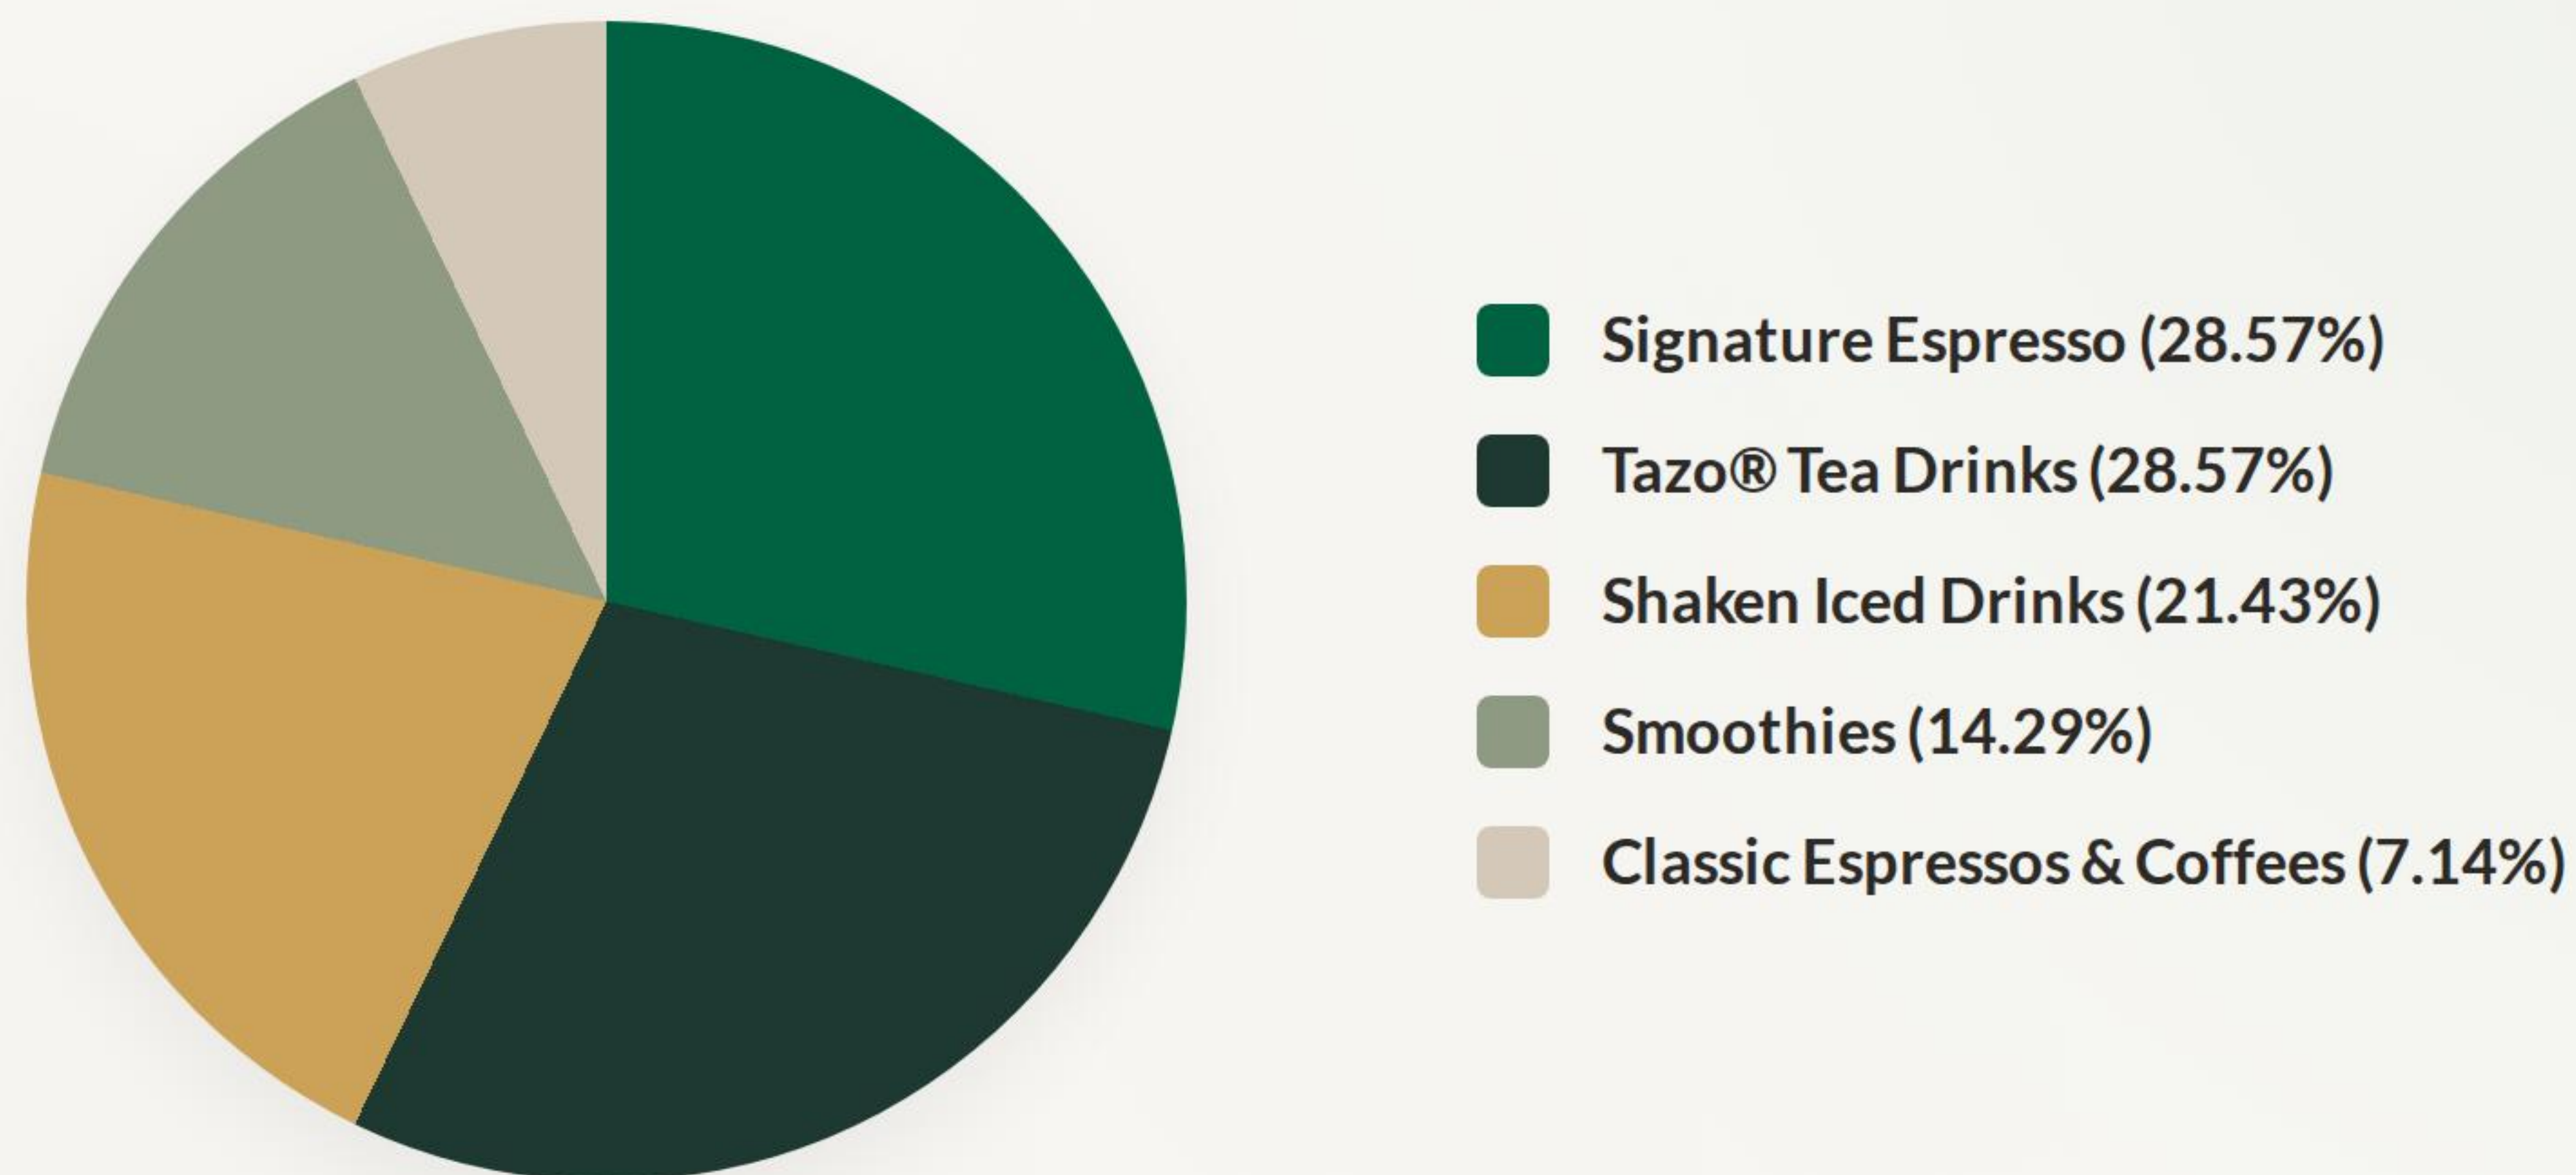

Strategic Menu Separation

Standardized beverages fall into two stark nutritional behaviors. While core coffee categories like standard Brewed Coffee hold high-density energy profiles (averaging 293.75 mg), many classic tea preparations stay exceptionally low to ground consumer hydration needs.

This distinct contrast provides a strategic layout framework for building dynamic menu suggestions and targeting unique consumer demographics on digital dashboards.

Beverage Category Portfolio Distribution

Signature Espresso and Tazo® Teas compose over half of the tracked dataset, representing the absolute foundation of corporate sales and product development analytics.

Brewing Insights

Your interactive Starbucks Dashboard is now finalized and fully operational!
